

**SMART CONTROL  
TECHNOLOGIES**  
AT YOUR FINGERTIPS

# The Downe Project

## AT A GLANCE

### Installed:

- Switching Modules
- Dimming Modules
- Motor Modules
- Digital Modules
- Generic Switches

### Benefits

- Control from any room
- Self-awareness
- Voice control
- Home security
- Integration with other systems

## BRIEF

This project was commissioned and directed by the owners of the property John & Sylvia Downe. They had purchased a house to demolish and make way for their WeberHaus built forever home and wanted to include as much "future proofing" as they could do when it came to the technology side. They approached us looking to implement the Niko Home Control system throughout.

## SOLUTION

As John & Sylvia had already done a lot of research into the Niko system they were sure it was what they wanted in their home. We discussed their ideas and created a design to suit them which was deployed across every aspect of the property. They now have a fully integrated central control system which they regularly use through Alexa, from waking up in the morning to resting at night. A few simple words and the house reacts to wrap them in comfort.

"We particularly like having the soft switches which means we can change their use at any time as our own lifestyle changes.

Our favourite feature is the voice control. With one command we can trigger multiple lights and blinds without having to touch any buttons or even get up from the sofa."
