

**SMART CONTROL
TECHNOLOGIES**
AT YOUR FINGERTIPS

The Fellows Project

AT A GLANCE

Installed:

- Switching Modules
- Dimming Modules
- Motor Modules
- Generic Switches
- Digital Blacks

Benefits

- Seamless integration of services
- Mobile phone control
- Voice control
- Presence simulation
- Personal security

BRIEF

This project was commissioned and directed by the owners of the property Peter & Lea Fellows. Whilst having the desire to build their dream home from the ground up they also envisaged being able to take their home to the next level by including a degree of "smart technology" inside the design. With having a good idea on what they would like to achieve they set out to find a solution.

SOLUTION

Using the Niko Home Control system we designed and built an infrastructure that would allow Peter & Lea the ability to control the lighting and blinds as they wished as well as running the cables required to include additional services should their needs change in the future. Remote control of their home was a must so using the Niko app became vitally important in fulfilling the original specifications.

"Central control from the app is paramount. It is a very well laid out app, very simple and easy to use.

The flexibility of the system is interesting as well. I see it as a component based system which we can add to as we think of new things."

Peter & Lea Fellows
