

The Hughes Project

AT A GLANCE

Installed:

- Switching Modules
- Dimming Modules
- Motor Modules
- Thermostats
- Generic Switches

Benefits

- Future Ready
- Flexible
- Presence simulation
- Integrated controls
- Sleek design

BRIEF

This project was commissioned and directed by the owners of the property Barry and Pat Hughes who were looking to create their new build forever home for retirement. Visiting the NSBRC Barry wasn't too sure what he was looking for in terms of home automation but could see the advantages of having a flexible home that can change in time with their own needs.

SOLUTION

With Barry and Pat looking to control the core sectors of their home, lighting, heating and blinds, the Niko system slipped into line perfectly. Centrally wiring the system back to a singular hub they have complete control of all their future integration but still using a conventional style switch. A sleek design, which fitted in with their own decor, and simple to use so they can benefit from a sophisticated system without the complicated wall controls.

"Having now recently completed the build and having the Niko system included, I find it difficult to imagine a house without it.

The flexibility of choosing and changing which switch does what and the ability to control the house electrics via a smart phone, I pad or Alexa is really special."

Barry & Pat Hughes
