

**SMART CONTROL
TECHNOLOGIES**
AT YOUR FINGERTIPS

The Blunston House Hotel Project

AT A GLANCE

Installed:

- Switching Modules
- 1-10v Analogue Modules
- Dimming Modules
- Touch Screen
- Generic Switches

Benefits

- Control from any room
- Self awareness
- Voice control
- Home security
- Integration with other systems

BRIEF

An external lighting company had initially been chosen to design and supply all lighting for the room and wanted to switch the lights through a simple and seamless panel. It was decided that Niko would be the best installation to offer a seamless switching experience as well as giving total control of the system through a touch screen which was to be installed in a communal staff area.

SOLUTION

Through splitting the room into different sections and levels we managed to create scenes to compliment any event being held within the conference room. With colour changing lights you could customise the experience for every guest whether it is a birthday, wedding or just a meeting. We even created a welcome scene which started one end of the room and created a "wave" effect across the entire ceiling and then down the walls to really bring that wow factor.

"I think the system is great.

The touch screen makes it very easy for the staff to switch between scenes and the different user log in's allows us to limit who can control what lights, from management to cleaners and any staff in-between ."
